

The public employee professionals at the Wisconsin State Laboratory of Hygiene DO NOT.

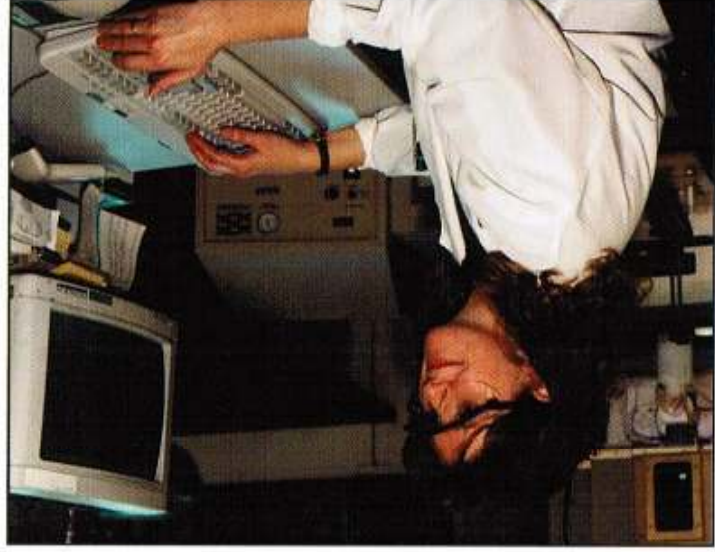

et, many people DO take Wisconsin's beautiful environment for granted. The scientists at your State Laboratory of Hygiene work hard every day to help ensure the continued quality of our environment.

When there may be a threat to public health, employees at the Wisconsin Laboratory of Hygiene perform thousands of analytical tests each year on a variety of environmental samples. You may not be aware of it, but the employees routinely test for PCBs and mercury, lead in paint and drinking water, toxic microorganisms like *Cryptosporidium*, airborne pathogens, radon, asbestos, nitrates, pesticides, and herbicides in a continuous effort to protect

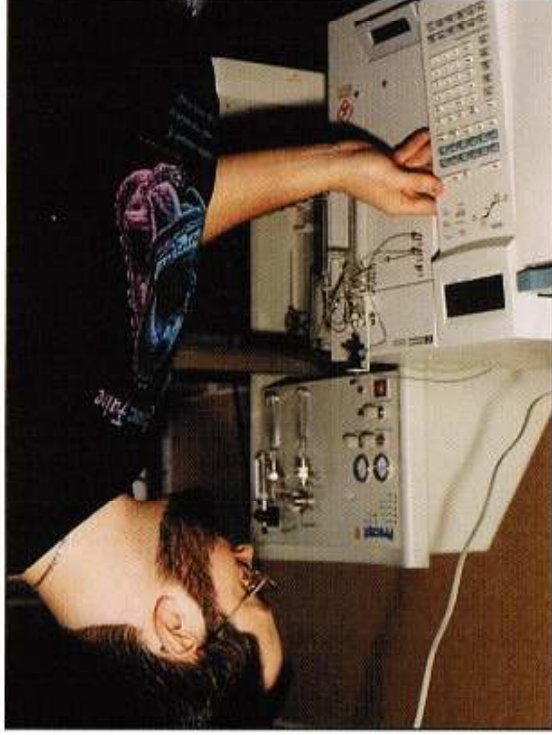

Wisconsin's lakes, streams, drinking water, air, and wildlife.

State employees provide quality services to the citizens of Wisconsin and constantly strive to provide for the best interests of the state and its inhabitants. Your support for these state employees is needed if we are to continue offering quality services.

Quality Services from Quality People

Jane Frawley,
Inorganic Chemist

Matt Roach,
Organic Chemist
